[Sql Server Studio For Mac](#)

Quick access to tables, columns, views and more.

Multi-tabbed editor with syntax highlighting and intellisense.

Stored procedure execution and support for multiple result sets.

The screenshot shows the SQL Server Studio For Mac interface. On the left is a server explorer tree showing the database structure. The main window is split into two panes. The top pane shows a SQL query editor with two lines of code: `SELECT * FROM actor;` and `SELECT * FROM address;`. The bottom pane shows the results of the query, displaying two tables. The first table lists actors with columns for actor_id, first_name, last_name, and last_update. The second table lists addresses with columns for address_id, address, address2, district, city_id, postal_code, phone, and last_update.

actor_id	first_name	last_name	last_update
